UNIT 10: THE FUTURE

1. Complete the sentences using the correct form of the verb in brackets. Use the future tense.

Verb	Form	Meaning
go to the cinema	will go	future
visit my grandparents	will visit	future
buy a new car	will buy	future
move to a new house	will move	future
start a new job	will start	future
finish school	will finish	future
get married	will get married	future
have a baby	will have	future
retire	will retire	future
die	will die	future

2. Write the future tense of the verbs in brackets.

- He **will** (go) to the gym every day.
- She **will** (visit) her parents next week.
- They **will** (buy) a new house in the city.
- He **will** (move) to a new apartment next month.
- She **will** (start) a new job in September.
- He **will** (finish) school in two years.
- They **will** (get married) next summer.
- She **will** (have) a baby next year.
- He **will** (retire) in five years.
- They **will** (die) in old age.

3. Write the future tense of the verbs in brackets. Use the correct form of the verb.

- He **will** (go) to the gym every day.
- She **will** (visit) her parents next week.
- They **will** (buy) a new house in the city.
- He **will** (move) to a new apartment next month.
- She **will** (start) a new job in September.
- He **will** (finish) school in two years.
- They **will** (get married) next summer.
- She **will** (have) a baby next year.
- He **will** (retire) in five years.
- They **will** (die) in old age.

1. **Introduction**
 The purpose of this study is to investigate the effects of a new educational program on student performance. The study was conducted over a period of six months, during which time data was collected from a sample of 100 students. The results of the study are presented in the following sections.

2. **Methodology**
 The study employed a quasi-experimental design, in which the participants were divided into two groups: an experimental group and a control group. The experimental group received the new educational program, while the control group received the standard curriculum. Data was collected through a series of tests and surveys, and the results were analyzed using statistical methods.

3. **Results**
 The results of the study indicate that the new educational program had a significant positive effect on student performance. The experimental group scored significantly higher on the tests than the control group, and the results were statistically significant. The data also showed that the new program had a positive effect on student motivation and engagement, which may have contributed to the improved performance.

4. **Conclusion**
 The study concludes that the new educational program is effective in improving student performance. The results suggest that the program should be implemented on a larger scale, and further research should be conducted to explore the long-term effects of the program. The study also highlights the importance of student motivation and engagement in the learning process.

1. The first step in the process of developing a business plan is to conduct a thorough market research. This involves identifying the target market, understanding their needs and preferences, and analyzing the competitive landscape. Market research can be conducted through various methods, including surveys, interviews, and focus groups.

2. Once the market research is complete, the next step is to define the business's mission and vision. The mission statement should clearly articulate the company's purpose and its commitment to its customers. The vision statement should describe the company's long-term goals and its aspirations for the future.

3. The third step is to develop a detailed financial plan. This includes creating a budget, forecasting revenue and expenses, and determining the company's break-even point. The financial plan should also include a contingency plan to address potential risks and uncertainties.

4. The fourth step is to create a marketing and sales strategy. This involves identifying the most effective channels for reaching the target market, developing promotional campaigns, and establishing a sales process. The marketing and sales strategy should be flexible and adaptable to changes in the market.

5. Finally, the business plan should be reviewed and updated regularly. As the business grows and the market evolves, it is essential to reassess the plan and make necessary adjustments. This ensures that the business remains competitive and on track to achieve its goals.

...and the other side of the coin is the fact that the world is not a homogeneous whole. It is a mosaic of different cultures, languages, and religions. This diversity is both a strength and a challenge. It allows for a rich exchange of ideas and experiences, but it also requires a willingness to understand and respect differences.

In the end, the world is a complex and beautiful place. It is a place of endless possibilities and challenges. It is a place where we can learn from each other and grow as individuals and as a species. It is a place where we can make a difference and create a better future for all.

the 1990s, the industry has been hit hard by a combination of factors. The most significant of these is the decline in the number of new entrants, which has led to a concentration of market share among a few large players. This has resulted in a more competitive environment, with prices falling and margins squeezed. Another major factor is the increasing pressure from governments and regulators to reduce the environmental impact of the industry. This has led to a range of measures, including the introduction of new standards and the implementation of more stringent controls. Finally, the industry has also been affected by a range of other factors, including changes in consumer behavior and the entry of new technologies.

Environmental Impact

The industry has a long history of environmental impact, and this has been a major concern for governments and regulators. In the 1970s, the industry was accused of polluting the environment, and this led to a range of measures being introduced to reduce its impact. These included the introduction of new standards for emissions and the implementation of more stringent controls. In the 1980s, the industry was also accused of contributing to global warming, and this led to a range of measures being introduced to reduce its carbon footprint. These included the introduction of new standards for energy efficiency and the implementation of more stringent controls. Finally, the industry has also been affected by a range of other factors, including changes in consumer behavior and the entry of new technologies.

1. *Journal of the American Medical Association*, 1997; 277: 1039-1043.

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.05	0.02	2.50	0.012
Gender of the head of household (Male = 1, Female = 0)	-0.15	0.08	-1.88	0.061
Constant	1.20	0.10	12.00	< 0.001

The regression results indicate that the age of the head of household has a positive and statistically significant effect on the number of children in the household. For every year increase in age, the number of children increases by approximately 0.05. The gender of the head of household also has a statistically significant effect, with male heads of household having a higher number of children than female heads of household.

the 1990s, the number of people in the United States who are obese has increased by 50 percent. In 1990, 15 percent of the population was obese. In 2000, 25 percent of the population was obese. In 2008, 33 percent of the population was obese.

Obesity is a major public health problem in the United States. It is a leading cause of death and disability. Obesity is also a major risk factor for many chronic diseases, including heart disease, diabetes, and cancer. Obesity is also a major cause of social and economic problems. Obesity is a complex problem that requires a multifaceted approach to address it.

There are many causes of obesity, including genetics, environment, and lifestyle. Genetics can play a role in obesity, but it is not the only factor. Environment and lifestyle are also major factors. A sedentary lifestyle and a diet high in calories and fat are major contributors to obesity.

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

that is, a more active role in the economy. The government has been successful in this regard, and the economy is now more active than it was in the 1980s.

The government has also been successful in reducing the unemployment rate. The unemployment rate has fallen from 10.5% in 1982 to 5.5% in 1992. This is a significant achievement, and it shows that the government has been able to create jobs for its citizens.

The government has also been successful in reducing the inflation rate. The inflation rate has fallen from 10.5% in 1982 to 3.5% in 1992. This is a significant achievement, and it shows that the government has been able to control inflation.

The government has also been successful in reducing the budget deficit. The budget deficit has fallen from \$170 billion in 1982 to \$100 billion in 1992. This is a significant achievement, and it shows that the government has been able to reduce its borrowing.

The government has also been successful in reducing the trade deficit. The trade deficit has fallen from \$100 billion in 1982 to \$50 billion in 1992. This is a significant achievement, and it shows that the government has been able to reduce its trade deficit.

The government has also been successful in reducing the current account deficit. The current account deficit has fallen from \$100 billion in 1982 to \$50 billion in 1992. This is a significant achievement, and it shows that the government has been able to reduce its current account deficit.

The government has also been successful in reducing the foreign debt. The foreign debt has fallen from \$100 billion in 1982 to \$50 billion in 1992. This is a significant achievement, and it shows that the government has been able to reduce its foreign debt.

The government has also been successful in reducing the interest rate. The interest rate has fallen from 10.5% in 1982 to 5.5% in 1992. This is a significant achievement, and it shows that the government has been able to reduce its interest rate.

The government has also been successful in reducing the money supply. The money supply has fallen from \$100 billion in 1982 to \$50 billion in 1992. This is a significant achievement, and it shows that the government has been able to reduce its money supply.

The government has also been successful in reducing the price level. The price level has fallen from 10.5% in 1982 to 5.5% in 1992. This is a significant achievement, and it shows that the government has been able to reduce its price level.

—

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

1. The first step in the process of the scientific method is to ask a question.

2. The second step is to do background research to find out what is already known about the topic.

3. The third step is to form a hypothesis, which is a prediction about the outcome of the experiment.

4. The fourth step is to design an experiment to test the hypothesis.

5. The fifth step is to conduct the experiment and collect data.

6. The sixth step is to analyze the data and draw conclusions.

7. The seventh step is to communicate the results of the experiment.

8. The eighth step is to repeat the experiment to verify the results.

9. The ninth step is to use the results to make a model or theory.

10. The tenth step is to use the model or theory to make predictions about other phenomena.

11. The eleventh step is to test the predictions by conducting further experiments.

12. The twelfth step is to refine the model or theory based on the results.
